Inserted adjunct questions and L2 reading with Chinese Advanced Learners development of learners' writing proficiency in the Content-Based Instruction (CBI) course. The second presentation focuses on the effectiveness of student-based approaches in L2 reading. The fourth presentation discusses the pedagogical model of word meaning network. Content-based instruction (CBI), that is, the teaching of a specific subject matter in a content-based context, has been widely used in second language teaching. A number of ESL studies investigating the effects of CBI have identified the positive impact of this approach on learners' language proficiency.

In fact, many empirical studies have reported the effectiveness of content-based instruction (CBI) in second language teaching. Content-based instruction (CBI) is a teaching approach that integrates content teaching with language teaching. It is based on the belief that language learning should be embedded in meaningful and authentic contexts. This approach has been widely used in second language teaching and has been shown to be effective in improving learners' language proficiency.

Miriam Burt is a senior adult English as Second Language (ESL) content specialist. Topic Area(s): Evidence-based Professional Development.
Numeracy Instruction) training and its precursor TIAN (Teacher Investigating Adult Numeracy). A state team leader and has trained numerous teachers following the SIA model.
